

First Observations from the ASPERA-3 ELS in the Mars Ionosphere

R. A. Frahm, J. D. Winningham, J. R. Sharber

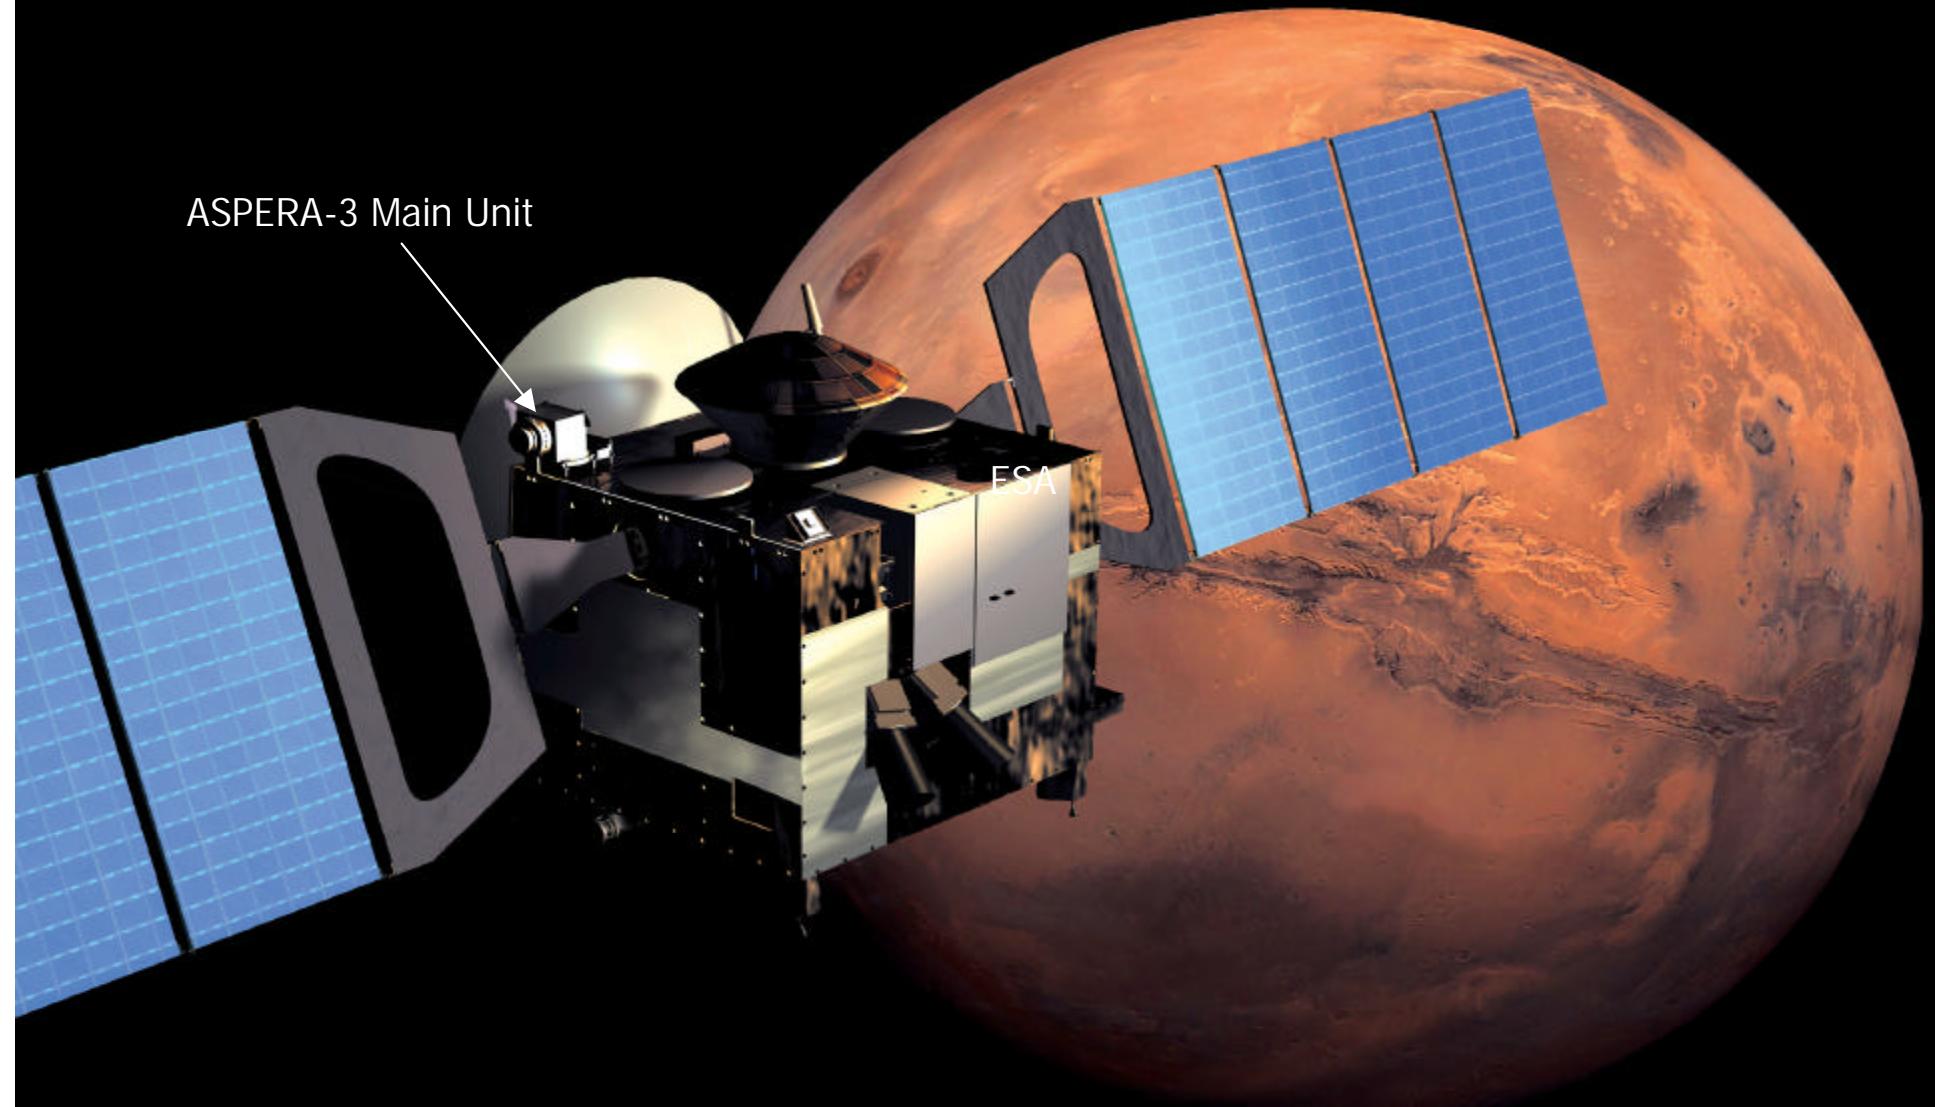

Southwest Research Institute, San Antonio, TX 78228, USA

S. Barabash, R. Lundin

Swedish Institute of Space Physics, Kiruna Division, Kiruna, Sweden

D. L. Linder, and A. J. Coates

Mullard Space Science Laboratory, University College London, United Kingdom

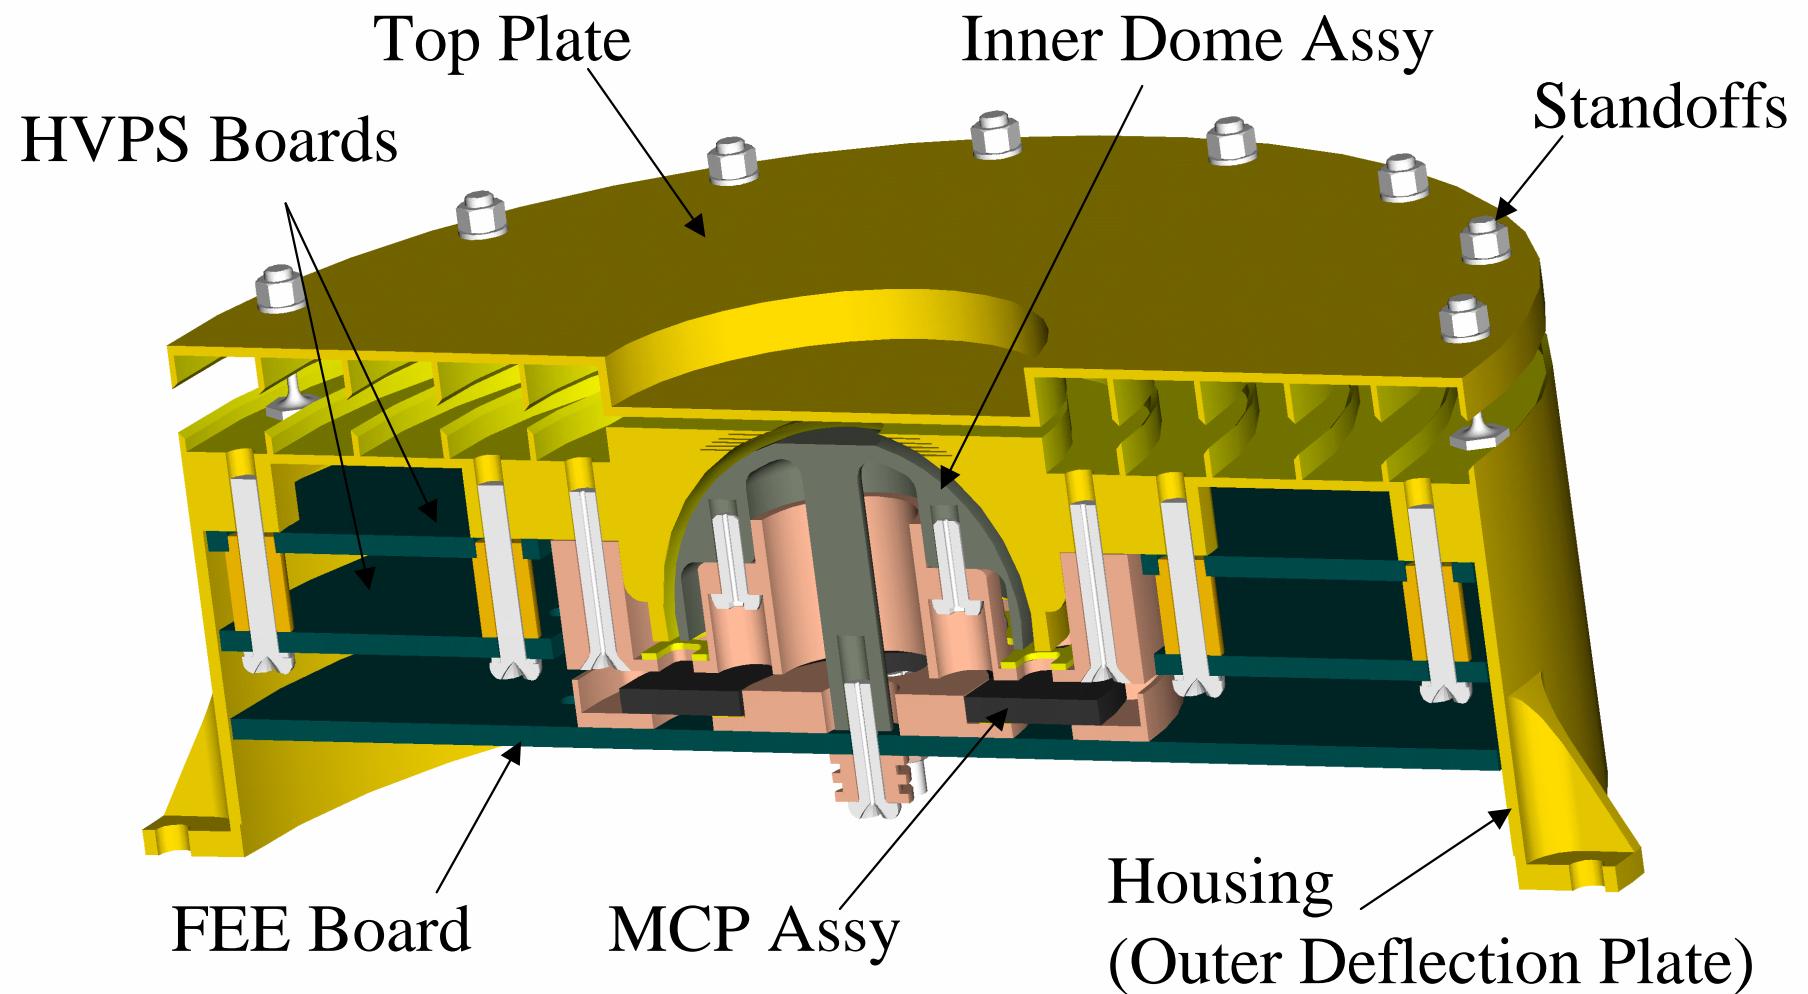

ASPERA-3 Main Unit

ESA

ESA Image: Mars Express Artist's View

Electron Spectrometer (ELS) Cross Section

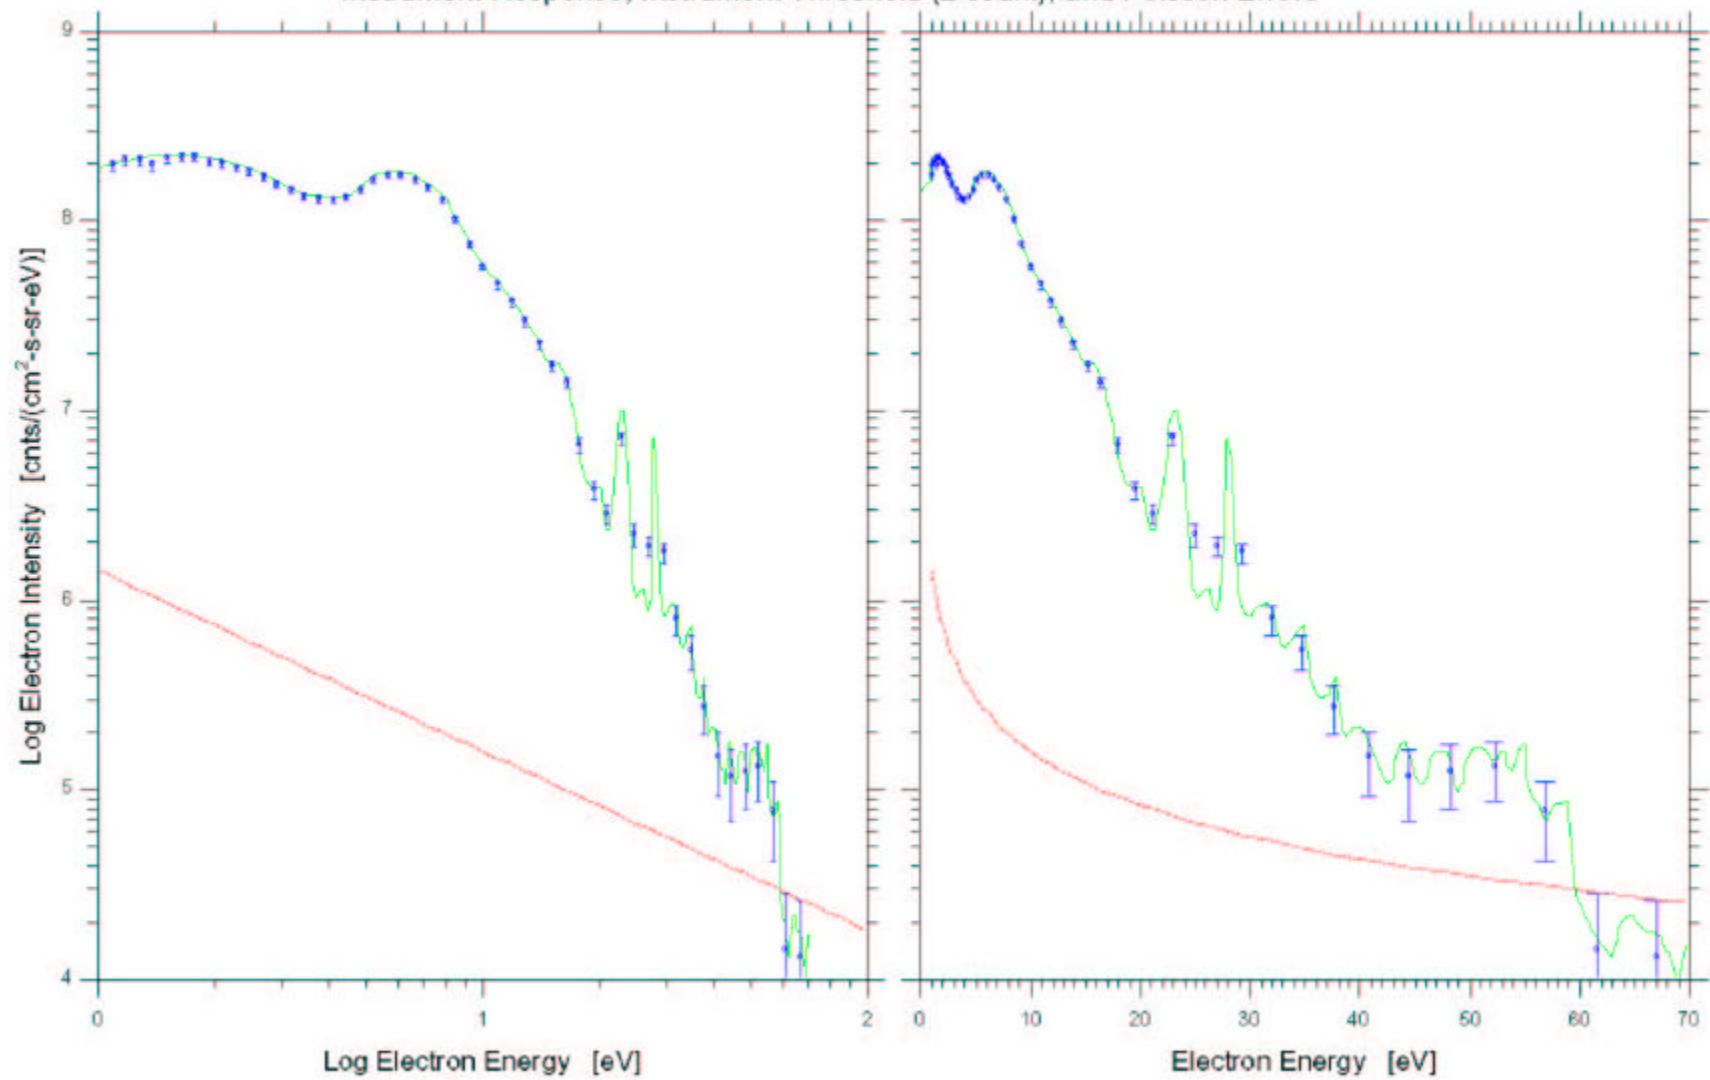

ELS Objectives

- Complement the ENA images
 - Provide solar wind parameters necessary for interpretation of ENA images
 - Provide in situ diagnostics of plasma environment
- Study local characteristics of plasma
 - Dynamics and structure of boundaries
 - Major photoelectron peak(s)

Expected Mars Photoelectron Spectrum at 145 km

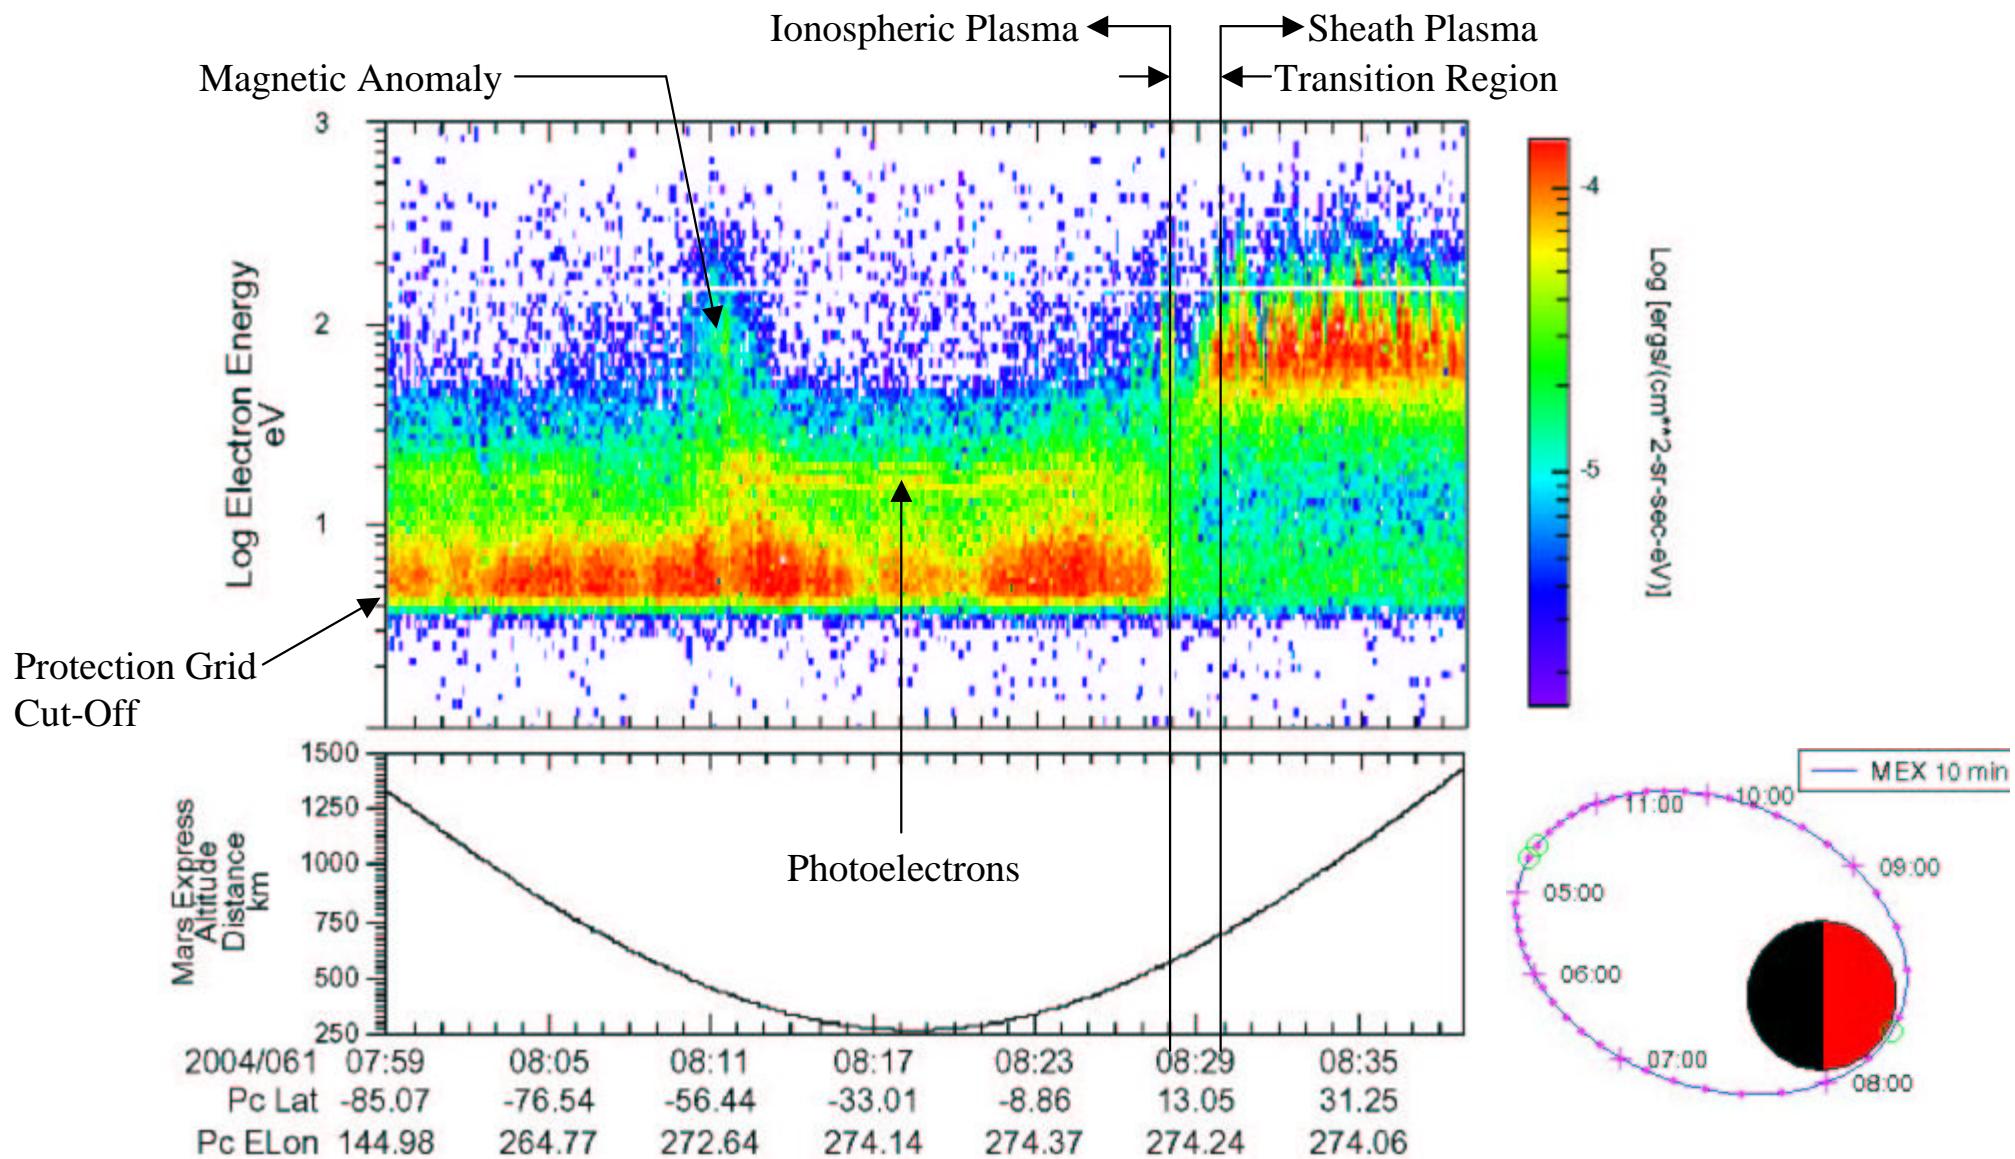

from the ASPERA-3 Electron Plasma (ELS) Instrument

Instrument Response, Instrument Threshold (2 count), and Poisson Errors

Mantas and Hansen, 1979

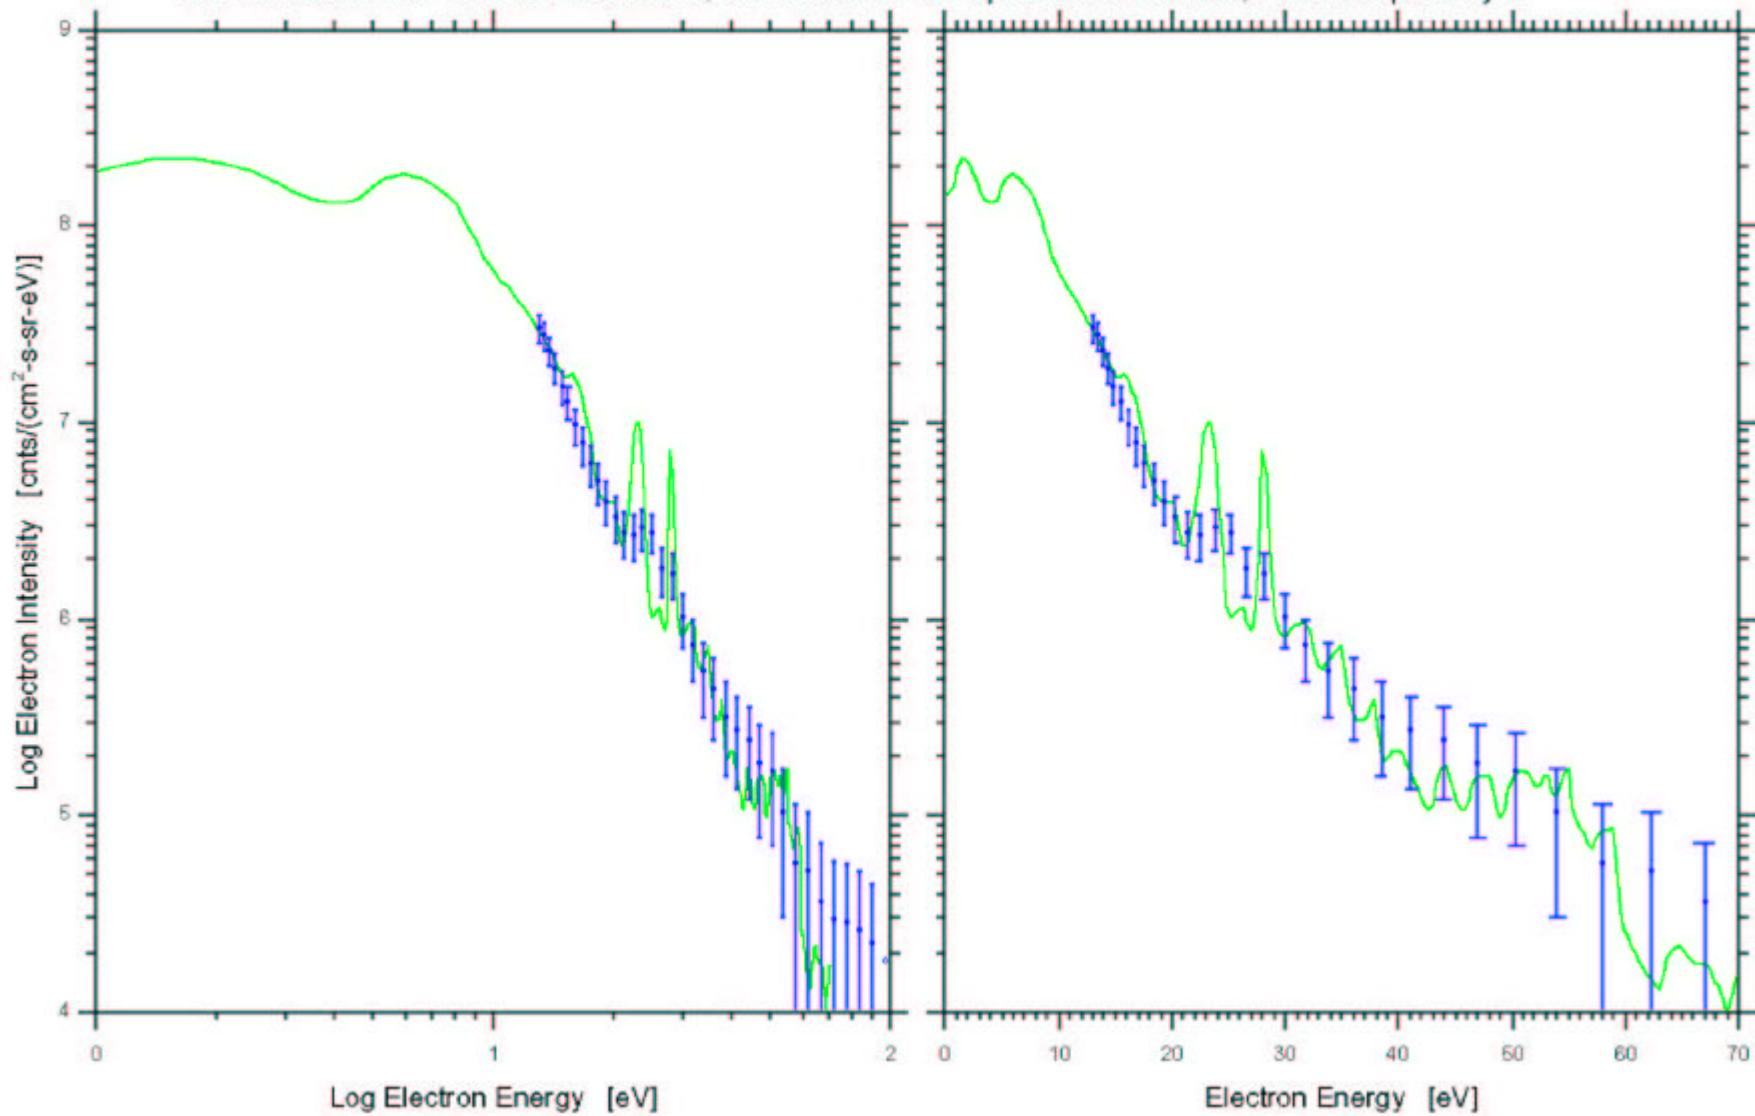

Electrons in the Mars Ionosphere

Expected Mars Photoelectron Spectrum at 145 km

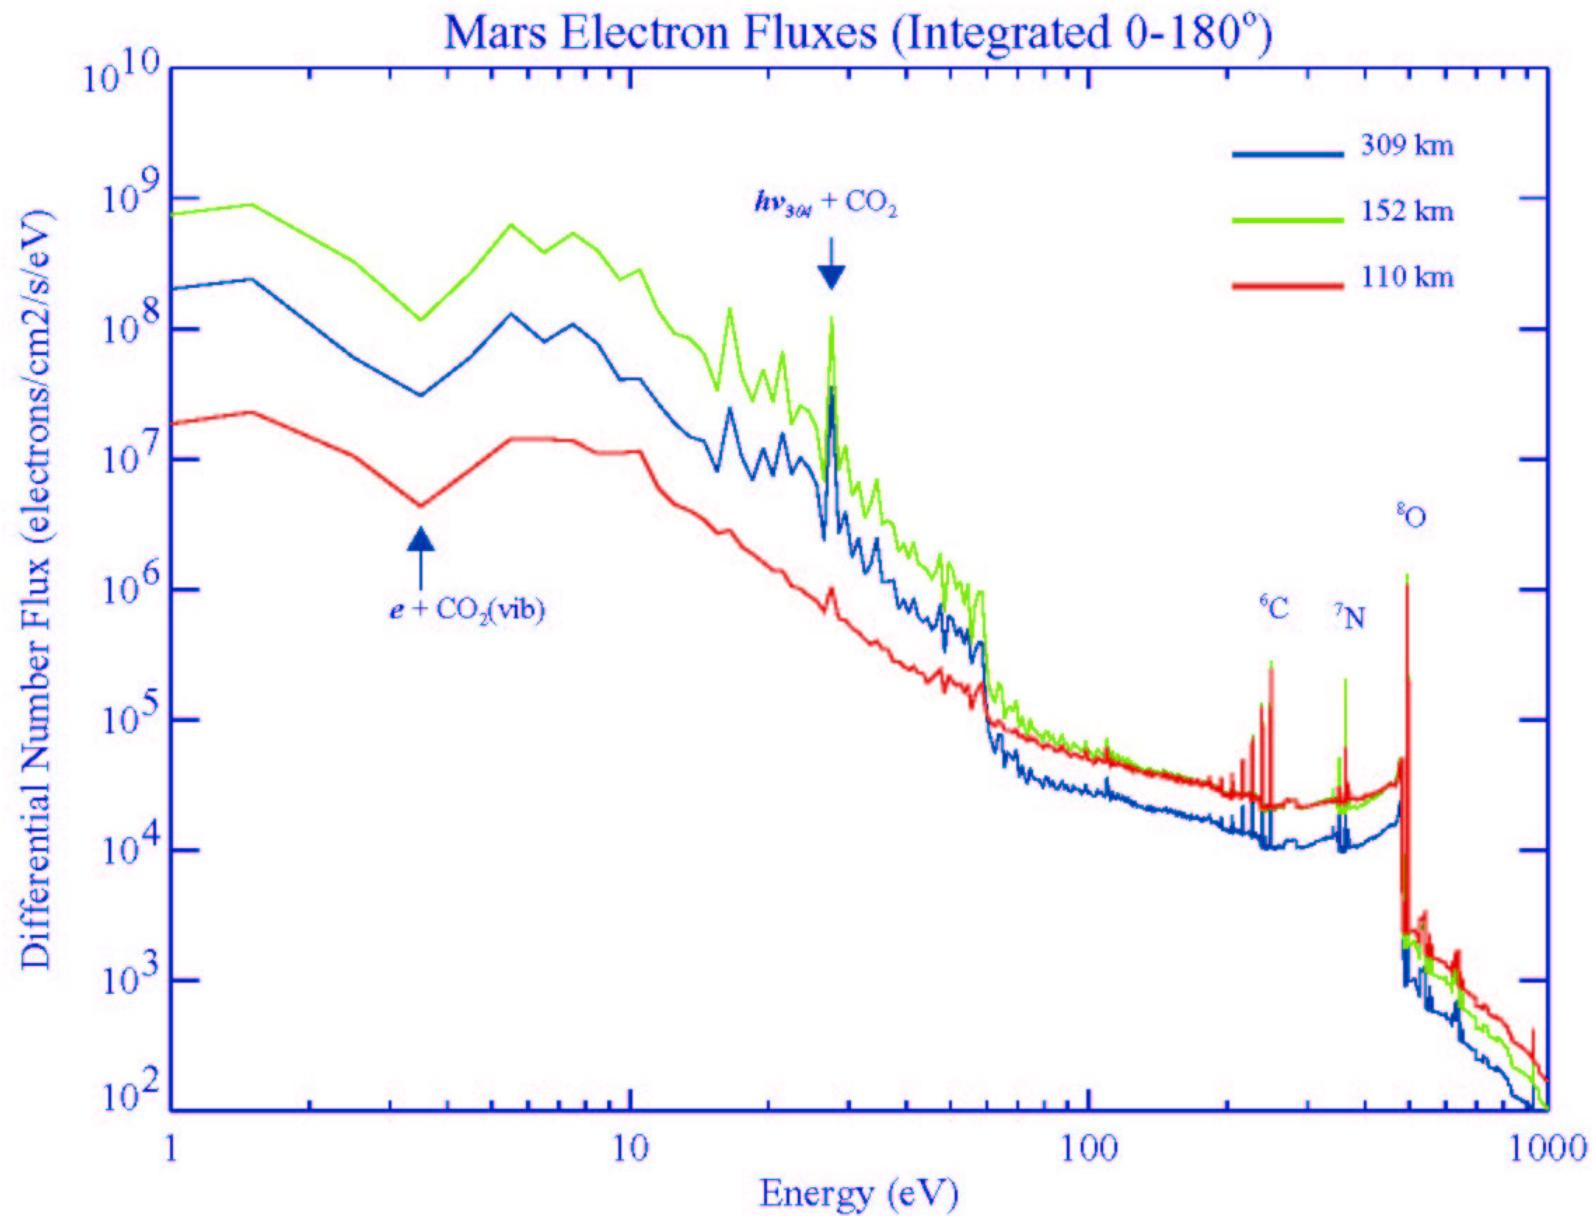

from the ASPERA-3 Electron Plasma (ELS) Instrument

2004061/08:11:00 - 2004061/08:22:00, Corrected for -8V Spacecraft Potential; Flux Multiplied by 2

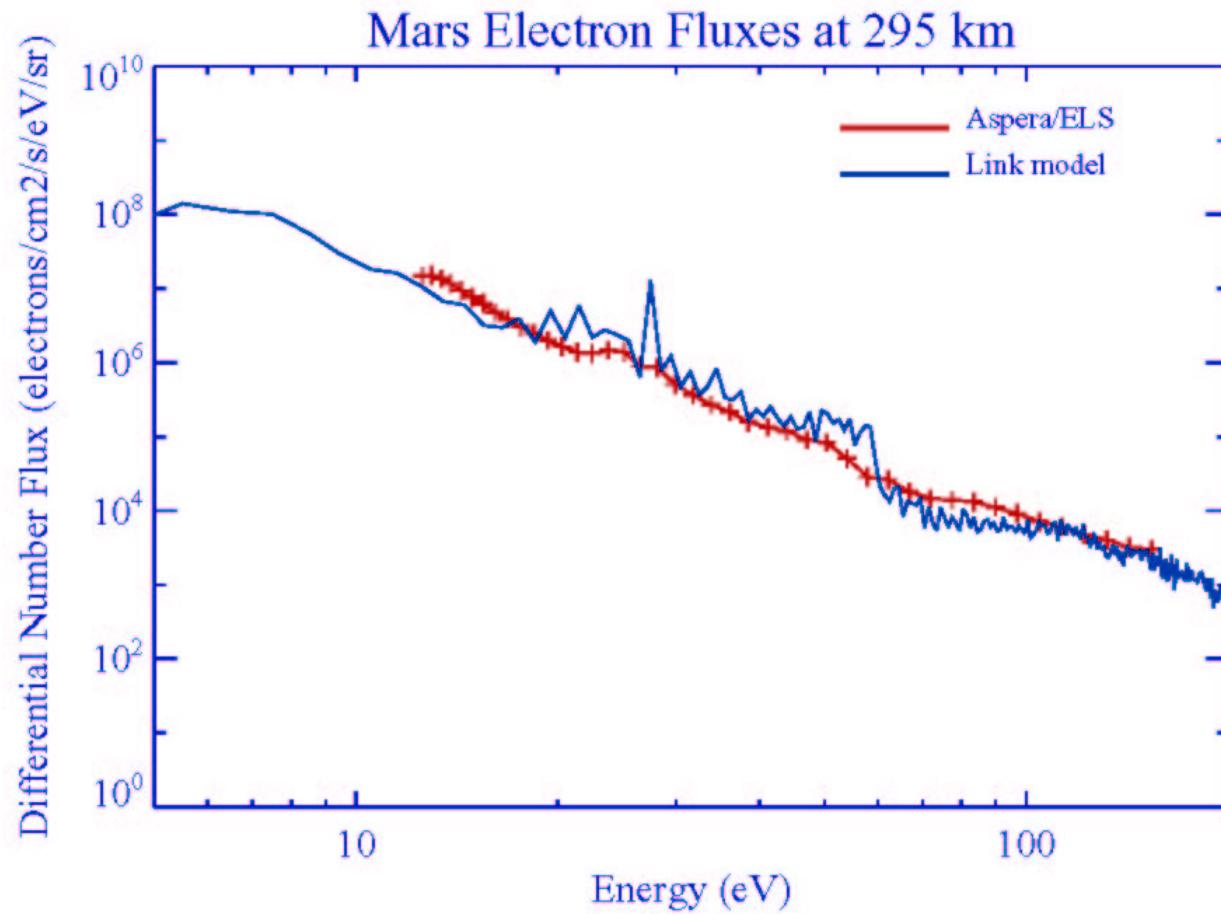

Mantas and Hansen, 1979

Mars Photoelectron Spectrum

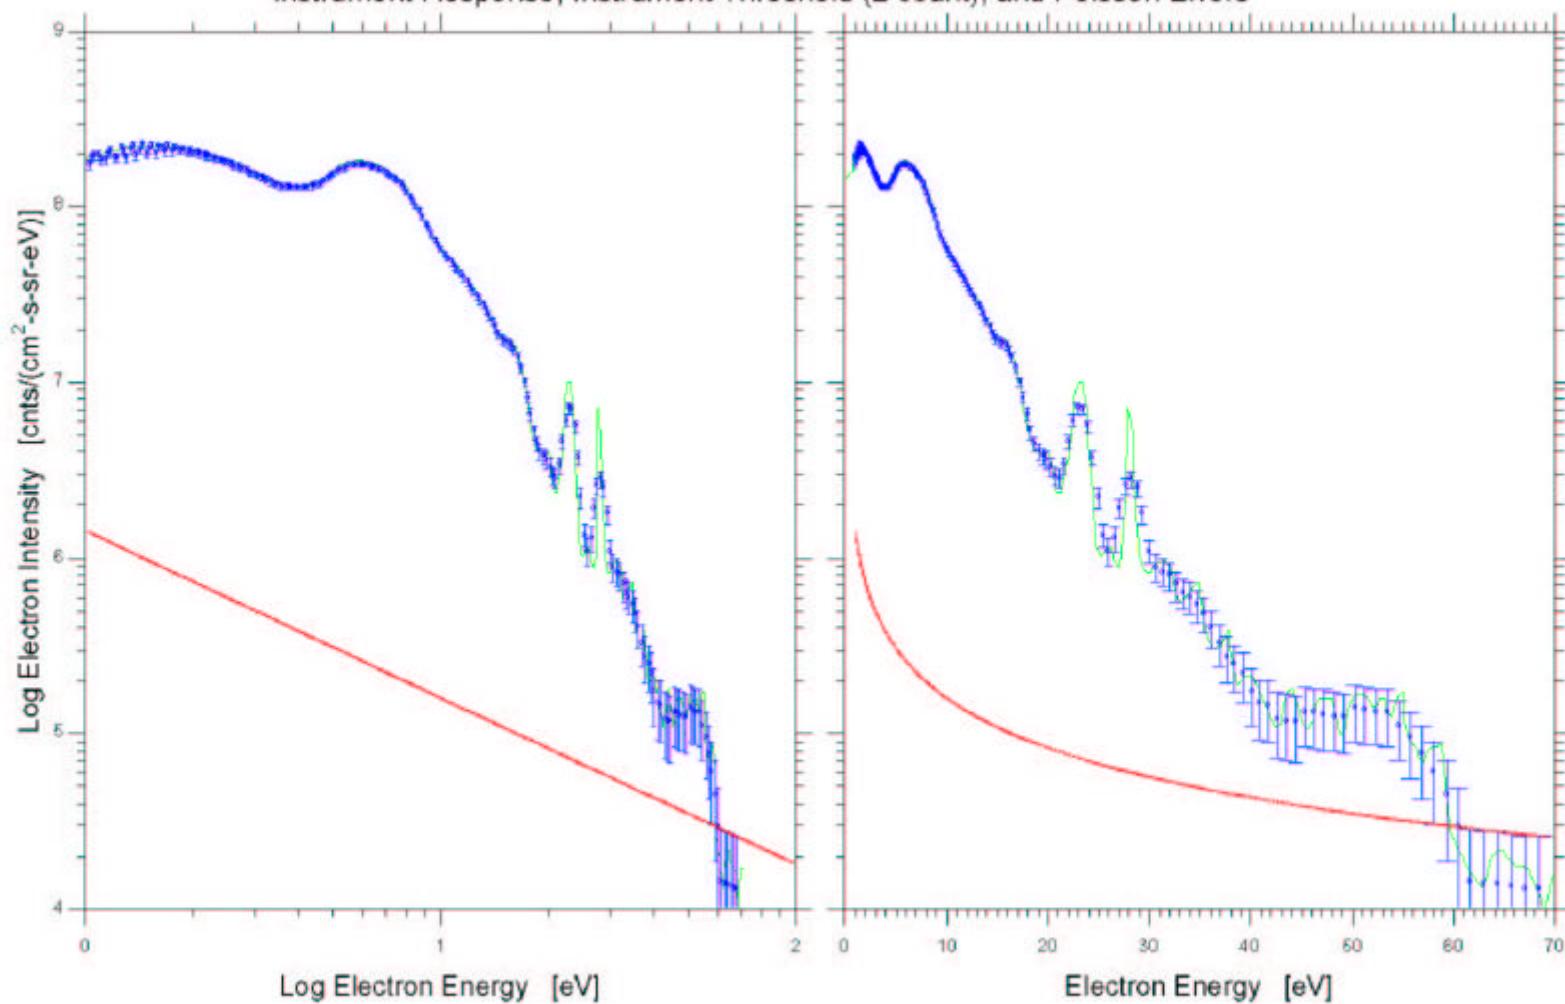

Comparison with results from Multistream Boltzman Transport code based on Link, 1992

Expected Mars Photoelectron Spectrum at 145 km

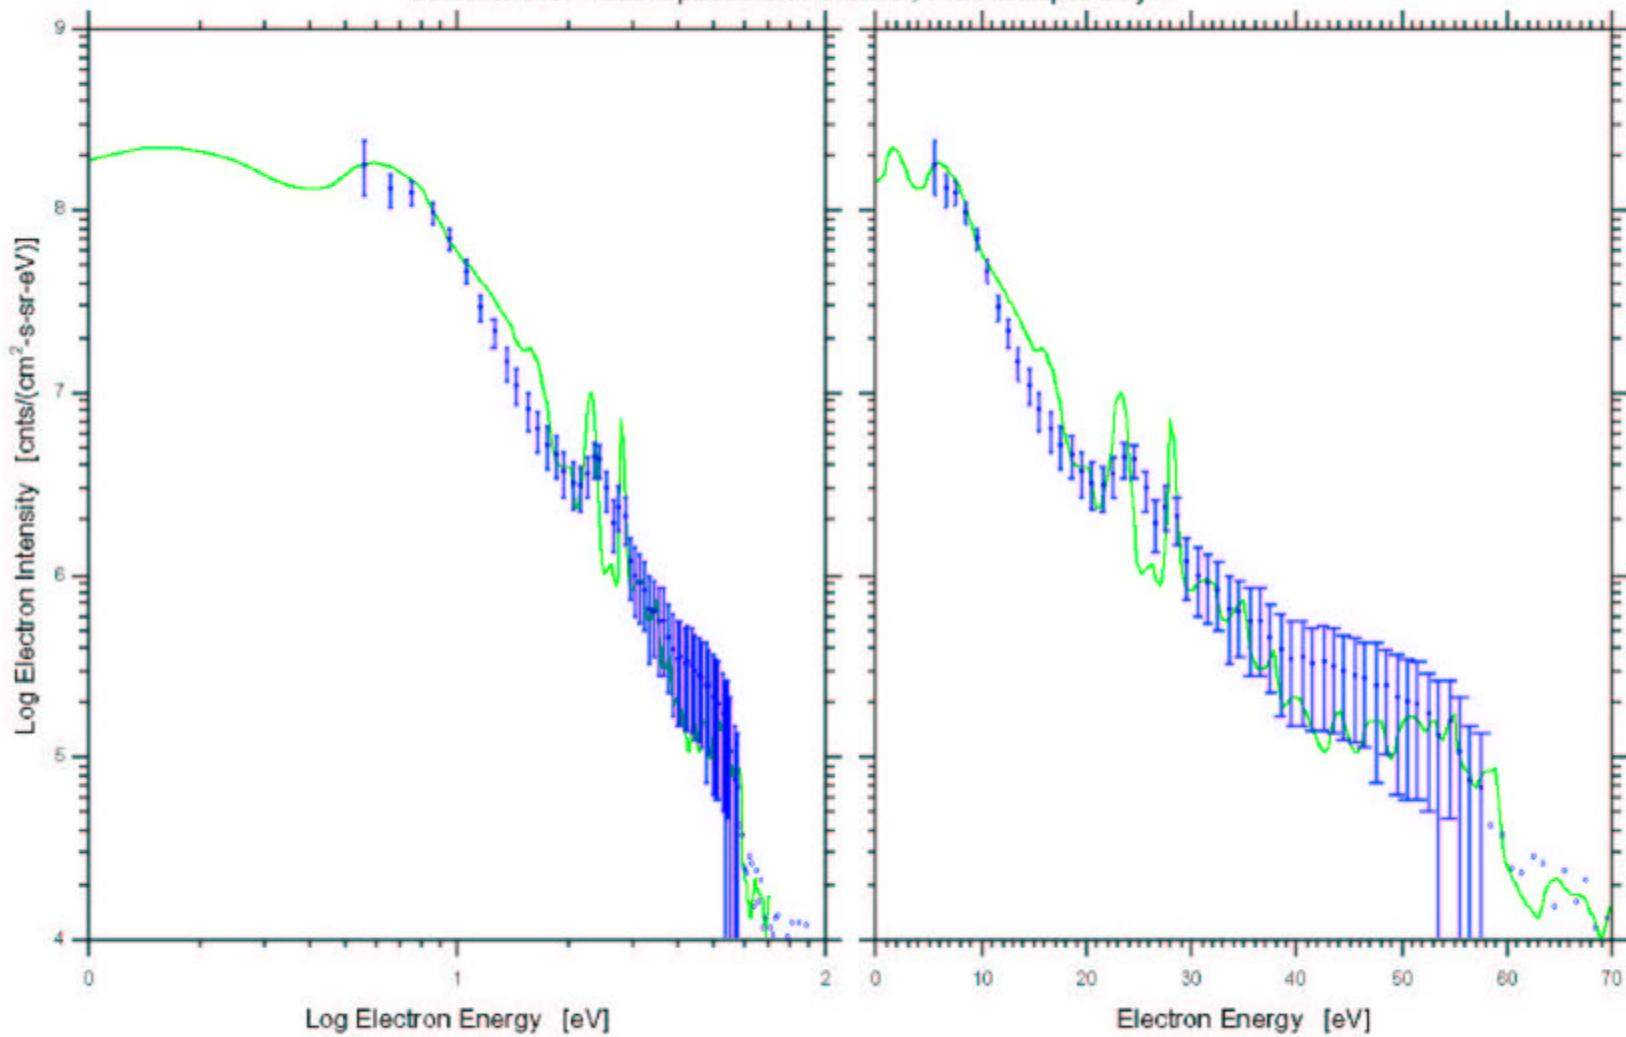

from the ASPERA-3 Electron Plasma (ELS) Instrument
Instrument Response, Instrument Threshold (2 count), and Poisson Errors

Expected Mars Photoelectron Spectrum at 145 km

from the ASPERA-3 Electron Plasma (ELS) Instrument

Corrected for -4.6V Spacecraft Potential; Flux Multiplied by 4

Conclusions

- Contiguous Resolution is Adequate to Show Major Photoelectron Peak(s)
- ELS Spectrum in Mars Ionosphere Shows Major Photoelectron Peak(s)
- Contiguous Resolution of Electrons Measured by ELS Fit Major Photoelectron Peaks which are Predicted by Mantas & Hanson as well as Link
- Oversampling of Photoelectrons Should Resolve the Quantity of Peak(s) and Allow Distinction Between some Martian Photoelectron Models
